Subject: FW: For your consideration- Evaluation of Groundwater Discharge to the Willamette River, RP - Portland Site
Date: 10/02/2007 04:30 PM

[attachment "Eval of GW Discharge to River.pdf" deleted by Chip Humphrey/R10/USEPA/US]

Chip and Eric,

Attached is Rhone-Poulenc's evaluation of groundwater discharge to the Willamette River. This evaluation is the result of questions raised in the July 2007 EPA/LWG TZW meetings as to the adequacy of in-water characterization with respect to the Rhone-Poulenc groundwater plume. Given that the document was generated primarily to address in-water RI data gaps, I am not sure why it was addressed only to DEQ. Please let Jim Anderson and I know what your review schedule is for the document.

Also, I will send an e-mail to the TCT informing members that the document is available for review. Given the size, I do not want to send it out to everyone.

Finally, AMEC is working on a related dioxin/groundwater tech memo also responding to questions raised during the July EPA/LWG TZW meetings. They do not have a firm schedule for when this document will be completed.

Matt McClincy
